Mac OSX LaTeX + Skim

环境: Mac OSX Mojave 10.14.3 (18D109)

Step 1: 下载MacTex http://tug.org/mactex/

Step 2: 下载Sublime Text 3 Beta http://www.sublimetext.com/3

Step 3: 下载安装Skim http://skim-app.sourceforge.net

Step 4: 在Sublime Text中安装Package Control https://sublime.wbond.net/installation

Step 5: 在Sublime Text中安装LatexTools

在Sublime Text里Command+Shift+P调出命令窗口,输入Install,之后选择LaTexTools

Step 7: Skim同步配置

Step 8: 修改编译和中文环境

点击Browse Package,然后

打开编辑~/Library/Application\ Support/Sublime\ Text/Packages/Users/LaTeX.sublime-settings,将其中"builder"条目改为: "builder": "simple" 接着打开编辑~/Library/Application\ Support/Sublime\ Text/Packages/LaTeXTools/builders/simpleBuilder.py 找到其中大概第41行 pdflatex = ["pdflatex", "-interaction=nonstopmode", "-synctex=1"] 修改为 pdflatex = ["xelatex", "-interaction=nonstopmode", "-synctex=1"] 保存后关闭,重新编译一下,中文正常啦!

OK,经过上面的步骤,整个Latex环境就搭建完毕了,下面做个测试:

在Sublime Text 输入如下代码:

\documentclass{article}

\usepackage{fontspec, xunicode, xltxtra}

\setmainfont{Hiragino Sans GB}

\title{Title}

\author{}

\begin{document}

\maketitle{}

\section{Introduction}

This is where you will write your content. 在这里写上内容。

\end{document}

保存后按 Command+B 编译,Skim直接显示:
